Interview Notes

Group Member: Rukshan | Character: Shan

Part 1: Interviewer Notes

Interviewer: Rukshan

Interviewee: Dulaj (Kai)

Q: Tell me about yourself?

A: My name is Kai. I am a final year University student.

Q: What kind of apps do you use to transfer money and how often do you transfer money?

A: I use multiple banking apps to transfer money, and I use those apps time to time, at least one transfer a day.

Q: Has there ever been a time you gave up on a task because of something?

A: Yes, A while ago one banking app asked me unnecessary permissions such as, permission for my contact list to add people for 'quick transfer' option. That was one time that I gave up on because of privacy concern.

Q: What matters you most in this banking app?

A: Privacy and no extra fees, these things are what I am most concerning in these kind of apps. And I'd like to have biometrics and I hope to have face unlock feature for banking apps. Also I'd like to have some kind of points for using banking apps. After collecting points, later I can spend those points on something like discounts, In app purchases.

Q: Whats one thing you most want us to remember about your experience with apps like this?

A: I'm living on a tight budget. If apps like this cost me money to use and If any of it have privacy issues I will not use that app after that.

Observation Sheets

Observation Sheet 01: Ashmitha (Aisha)

Question	Observation	Interpretation	Design Implication
How do you usually handle your banking with your busy schedule?	Mostly relies on her smartphone for banking cause she lack time.	Needs an app that is built specifically for quick mobile use.	Optimize buttons so they are easy to tap in a rush.
How long you used the app?	Spends very little time on the app (5-10 minutes daily).	Wants to complete her tasks instantly and log out.	Reduce loading screens and long login processes.
Why are you using banking app daily. What is the need?	Uses the app for issue client cheques and paying daily bills.	Manages complex business tasks on a small screen.	Add a quick-action menu for frequent business tasks.
When did a slow app cause a real problem for you?	A lag in the BOC app delayed a client payment and cost money.	App stability is a serious issue that affects her livelihood.	Ensure the app servers are always fast and reliable.
How do you manage your main job and side business money?	Desperately needs a faster way to switch between her accounts.	Current account switching methods are too slow for her.	Implement a quick toggle switch between personal and business.

Observation Sheet 02: Shamil (Marco)

Question	Observation	Interpretation	Design Implication
Tell me about yourself.	Freelance designer at night, delivery rider during daytime.	Depends on his smartphone for both of his jobs.	Make the app easy to view outdoors on a bike mount.
How do you usually use banking app?	Constantly checks his balance to see if clients have paid.	Financial anxiety make him check the app frequently.	Show the balance clearly without needing extra taps.
What's the most frustrating part?	Gets extremely frustrated if transfers are slow or delayed.	Delays in the app prevent him from doing his daily work.	Improve the processing speed of incoming transfers.

Have you ever had a bad experience?	Was waiting on a delayed payment just to buy fuel for bike.	The app failing causes him severe real-world problems.	Create instant pop-up alerts for incoming money.
What would a perfect banking app look like?	Needs an app that open fast, alert him instantly, and never crash.	Reliability is the only thing that truly matters to him.	Prioritize bug fixes over adding unnecessary new tools.

Observation Sheet 03: Bashini (Lindiwe)

Question	Observation	Interpretation	Design Implication
Can you tell me a little about yourself?	A mom managing the entire household finances and daily schedule.	Often multi-tasking and distracted while using the phone.	Keep the screen layout simple and uncluttered.
What banking services do you use most often?	Mainly uses it to keep track of family spending and pay bills.	Needs tools to help her manage the family money efficiently.	Put utility payments front and center on the dashboard.
What challenges do you face when using banking apps?	Struggles to navigate complicated menus while busy at home.	Too many choices confuse her and slow her down.	Limit the main menu to only the most essential features.
What feature would help you the most?	Wants payment reminders and a tool to track household expenses.	Needs proactive help to stay on top of the family budget.	Add an automatic expense tracker and due date reminders.
What is most important to you in a banking app?	Values security, reliability, and an easy to use interface.	Must feel safe trusting the app with her family funds.	Use clear, friendly language for security checkpoints.

Observation Sheet 04: Dasindu (Uncle Samy)

Question	Observation	Interpretation	Design Implication
Tell me about yourself? How do you start your day?	A 68-year-old living alone with very consistent daily routine.	Not very tech-savvy and prefers simple traditional methods.	Design the app to look clean, familiar, and non threatening.
Do you use any mobile apps and what are the reasons to use them?	Use the banking app specifically to send money to family overseas.	Has a single, highly specific purpose for using the app.	Make the international transfer process extremely clear.
When you use that App do you struggle with that?	Too many details on the screen make him feel confused.	Information overload is a major problem for elderly users.	Use large text and hide unnecessary menus.
Do you have any issues living alone?	Cannot use WhatsApp video calls to talk to his family.	Struggles to learn digital tools without human guidance.	Add a very simple, one-tap button to call customer service.
If you get another chance to go back in your life and change something what would it be?	Wishes he knew more about IT and computers.	He wants to learn but is intimidated by modern apps.	Include a simplified Basic Mode for older users.

Group Deliverable

3 Key Insights (What did you learn?)

- 1.App delays cost money: When the app is slow, Shamil and Aisha lose money. For Rukshan, a slow OTP makes him just delete the app.
- 2.Clutter is a big problem: Having too much menus confuses Uncle Samy, gets in the way for busy moms like Bashini, and annoys the younger ones.
- 3.Chatbots are annoying: It was interesting how both old (Samy) and young (Rukshan) users agreed they hate chatbots. They just want to talk to a real person when things go wrong.

2 Conflicting Needs (Where do characters disagree?)

- 1.Simple screen vs Extra tools: Samy wants an empty screen so he dont click wrong buttons, but Bashini and Rukshan actually wants extra tools like expense tracking added in.
- 2.One account vs Multiple: Aisha really needs a fast way to jump between personal and business accounts, while everyone else just want a basic single-account view.

1 Core Feature (What must the app have?)

- A Quick Access Dashboard: The home screen should let users pin their top 3 things. This gives Aisha her fast payments, lets Bashini skip the confusing menus, and keep the screen completely clean and safe for Uncle Samy.
